

## **Week 2: Formalize Your Ideas**

- Use the Amazon API to allow users to keep track of personal care products purchased and record overtime how much product they have left. Allow users to record the expiration date of the product and have reminders sent to their phone as to when to dispose of/repurchase the product.
- Use the Yelp API to allow users to find stores near them based on an item they are looking for by retrieving data from Yelp reviews. Allow users to record whether they were successful in retrieving the item to assist other users looking for the same item.
